

IMPACT

C. diff infection is estimated to cause almost half a million illnesses in the United States each year, and an estimated 29,300 deaths.¹

About **1 in 6 patients** who get *C. diff* infection will get it again in the subsequent 2–8 weeks.¹

One in 11 people over 65 diagnosed with a healthcare-associated *C. diff* infection die within a month.²

RISK

People are 7 to 10 times more likely to get *C. diff* infection while taking an antibiotic and during the month after.³

Extended stays in healthcare settings, such as hospitals and nursing homes, also increase their risk.

More than 80% of *C. diff* deaths occur in people 65 and older.
